

ALDEN DEBES

SHORT-TERM REHABILITATION
AND HEALTH CARE

Enhance Your Patients' Care with Onsite Dialysis at Alden Debes Rehabilitation and Health Care

Post-Acute Services offers potential clinical and quality of life benefits

Did you know an estimated 50,000 (1 in 10) ESKD patients reside in skilled nursing facilities (SNFs)?¹ These patients typically travel several times a week for dialysis, potentially incurring challenges and risks as well as the possibility of missed treatments and hospital readmissions. With Alden Post-Acute Services, your patients can receive convenient onsite dialysis care. What's more, your patients can experience a care model tailored to their needs that ultimately, may help improve their health and quality of life.

Optimal Treatment Continuity

Our licensed professionals deliver dialysis to Alden Debes patients three times a week using traditional machines with portable water systems. This maintains the process many patients are used to in the outpatient setting and may ease their transition into the SNF.

As the patient's nephrologist, you maintain oversight of treatment orders and can collaborate with onsite staff to maintain adherence.

Why Choose On-Site Dialysis with Alden

1 in 10
ESKD patients
resides in a SNF.¹

Alden Post-Acute
Services offers
your patients
**in-center
dialysis benefits**

Patients receive
high quality
kidney care with
local nephrologist
oversight.

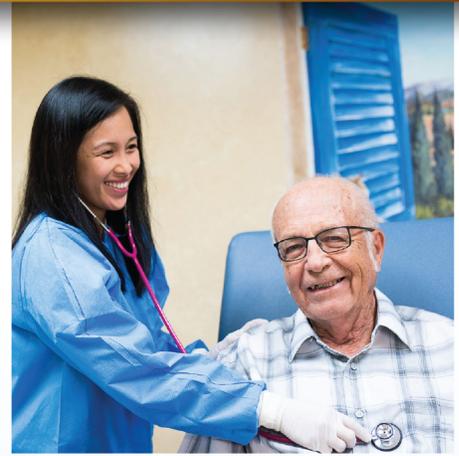

Highly Skilled Care Team

When your patients are discharged to Alden Debes with Post-Acute Services, they gain the expertise of a national leader in dialysis care as well as medical director oversight by a local, experienced nephrologist and a highly trained clinical staff composed of RNs, patient care technicians (PCTs), dietitians and social workers. In addition, critical care coordination is enhanced with local discharge-planning and dedicated operations teams.

Robust Patient Programs

Alden offers a suite of patient education resources that help support patients, including Kidney Smart[®], Start Smart[™] and Transplant Smart[®] services and materials. Patients also may benefit from clinical programs, implemented with local nephrologist oversight, that leverage risk stratification, artificial intelligence and other tools aimed to help decrease hospital readmissions.

Demonstrated Care Quality

1. US Renal Data System. USRDS 2016 Annual Data Report: Atlas of Chronic Kidney Disease and End-Stage Renal Disease in the United States.
2. 2020 DaVita Internal Analysis

DaVita has provided information on our total patients treated only to better inform you of DaVita's experience in dialysis. Patients always have the choice from which provider they receive dialysis.
